Introduction to applied colloid and surface
chemistry ...

Colloid science is the science of both large
molecules and finely subdivided multiphase
systems. It is the system of more than one
phase that colloid and surface science meet.
Colloid science is interdisciplinary in many
respects; its field of interest overlaps
physics, biology, materials science, and
several other disciplines. It is the particle
dimension - not the chemical composition ...

or ions are invisible, and they do not settle out on standing. A group of mixtures called colloids (or colloidal dispersions) exhibit properties intermediate between those of suspensions and solutions. The particles in a colloid are larger than most simple molecules; however, colloidal particles are small enough that they do not settle out upon standing.

11.5 Colloids - Chemistry

A colloid is a mixture that has particles ranging between 1 and 1000 nanometers in diameter, yet are still able to remain evenly distributed throughout the solution. These are also known as colloidal dispersions because the substances remain dispersed and do not settle to the bottom of the container.
